

What's New at AV Designs

Bryston Digital Player BDP-1

- Its single function is to play high-resolution digital music files without compromise using a USB drive
- Does not contain a hard-drive (no moving parts) or streamer or CD player or ripper, or noisy fans and switching power supplies
- Its mainboard is of industrial quality. The Bryston modified soundcard is one of the finest available
- Electronic isolation of audio components from computer components
- Support 16-bit and 24-bit files with the following sample rates: 44.1KHz, 48KHz, 88.2KHz, 96KHz, 176.4KHz & 192KHz
- It reproduces the digital content in its native sample rate and bit depth and outputs the data stream to a DAC (preferably the Bryston BDA-1)
- It processes digital music files at a performance level unattainable with other approaches.
